what is semantic like

- python sdk
- exposes the semantic model as python objects
- can read and modify model metadata
- used in fabric notebooks

what is semantic link!

the bridge in the bar
between power bi and
synapse data science
bridge

fabricdatapipeline is the
data structure it uses

usage of semantic link

semantic models

- **conventional**

- **lexical level**
- **syntactic level**
- **business level**

prerequisites

`ms.sparkutils.session.stop`

InvalidHttpRequestToLivy: [TooManyRequestsForCapacity] This spark job can't be run because you have hit a spark compute or API rate limit. To run this spark job, cancel an active Spark job through the Monitoring hub, choose a larger capacity SKU, or try again later. HTTP status code: 430 {Learn more} HTTP status code: 430.

- a microsoft fabric subscription
- sign in to microsoft fabric
- create a new notebook or a new spark job to use this package

what are potbooks - in fabric -

- web-based
- code first
- differentiable latencies - pre-pare, spare, spare SQL and r -
- native integration with databases

what are notebooks - in fabric-

```
1 first_parameter = 5
2 second_parameter = 3
```

✓ 15 sec - Session ready in 14 sec 755 ms. Command executed in 476 ms by jodavid on 10:48:26 PM, 10/27/25

```
1 third_parameter = first_parameter * (second_parameter + first_parameter)
```

✓ <1 sec - Command executed in 389 ms by jodavid on 10:48:27 PM, 10/27/25

```
1 fourth_parameter= third_parameter - first_parameter
```

✓ <1 sec - Command executed in 348 ms by jodavid on 10:48:27 PM, 10/27/25

```
1 display(f"{first_parameter}, {second_parameter}, {third_parameter}, {fourth_parameter}")
```

✓ 2 sec - Command executed in 2 sec 767 ms by jodavid on 10:48:56 PM, 10/27/25

'5, 3, 40, 35'

code is in cell based code
blocks.
this is easy to debug or
test things

what are datagrams

```
1 import pandas as pd
2
3 df = pd.DataFrame({
4     'Kingdom': ['Gondor', 'Rohan'],
5     'King': ['Aragorn', 'Theoden'],
6     'Capital': ['Minas Tirith', 'Edoras']
7 })
8 display(df)
```

	ABC Kingdom	ABC King	ABC Capital
1	Gondor	Aragorn	Minas Tirith
2	Rohan	Theoden	Edoras

a datagram is a data structure constructed with rows and columns. similar to a database or excel spreadsheet.

- Semantic link
 - meta-parameters that depends on the individual parts
 - Semantics - or functional-solidarity or hereditary or... -
 - parameters that contain core functionalality
 - ~ the individual parts

- Semantic link labels
 - Get the capabilities of Semantic link

completing

the start

- install import
- get data if needed ~ workspace item ~
- integrate on the list
- use semantic link function
- cleanup
- write

install import

Semantic link

- installed in fabric by default
- import it to start

```
1 import sempy.fabric as fabric
```

Semantic link labs

- needs to be installed

```
1 %pip install semantic-link-labs
```

- or create an environment

Environment

Set up shared libraries, Spark compute settings, and resources for notebooks and Spark job definitions.

get data ~if needed~

from fabric

```
1 workspaces = fabric.list_workspaces()  
2 sparkdf = spark.createDataFrame(workspaces)
```

from lakehouse

```
1 Workspaces = spark.sql("""select Id, Name  
2 from LH_SemanticLink_Data.Workspaces""")
```

integrating

```
1  for Id, Name in Workspaces.toLocalIterator():  
2      print(Name)
```

use semantic link function

get the list of workspaces

```
1 Workspaces = spark.sql("""select Id, Name  
2 from LH_SemanticLink_Data.Workspaces""")
```

```
for Id, Name in Workspaces.toLocalIterator():  
    temp_items = fabric.list_items(workspace=Id)
```

iterate over them

by splitting the code we
can work with the list
without repeating it each
time

Անտիք

տոնը անտիքիս արի է ել
հանդիս ընկնի

```
def fnc_PrepareColumns(_Columns):

make a gif.com

the start

- install imports
- get data if needed ~ workspace item ~
- integrate on the list
- use semantic link function
- cleanup
- write

this is the logical order

but perhaps all
things you have to
do are not. so the order
in the notebook is
different
